

Introductory webinar to geostatistical approaches

Last Modified on 10/03/2025 10:50 am GMT

Recording of the Tropical Data geostatistics webinar, hosted online on the 30th August 2023. This webinar was designed to give an overview on the incorporation of model-based geostatistics (MBG) into the Tropical Data service. Speakers gave presentations on the background, technical implementation and rationale for using this approach, and two case-studies were presented by health ministry partners to provide examples of how MBG has been employed so far. The webinar ends with a Q&A session with panellists from WHO, Tropical Data, Sightsavers and the University of Lancaster. Once you have watched the webinar, please complete the webinar survey following the links in the "webinar survey links" section.
